

SOLAR + STORAGE:

Fastest to Build

America needs more power now, not 4 years from now. AI and data centers are putting new demands on America's already-stressed energy grid, raising electricity prices.

The solution is to add a lot more affordable power—FAST. **Solar and storage are the fastest energy sources to market**, making them critical tools in lowering American's bills and winning the global AI race.

79%

of the **new capacity** added to the grid last year came from solar and storage

5 years

of **solar leading** all sources in new additions

70%

of the **planned additions** between now and 2030 are solar and storage.
